Preface

This guide includes the information you need to install or upgrade Kofax VRS Elite and activate the product license. You can also use the instructions to upgrade an OEM version of Kofax VRS 4.x or 5.x. For detailed information about the product features and user interface, see the Kofax VRS help.

Product files location

If you download Kofax VRS from the Kofax Fulfillment site, refer to instructions on the site to extract the product files from the ISO file to a local drive. If you receive Kofax VRS as a package that includes the product files on removable electronic media, use the media to perform the installation. In this guide, the term "product files" applies to either the extracted files or the electronic media.

Kofax VRS Elite installation

Kofax VRS Elite is an image enhancement tool intended to provide the best possible image quality across the widest range of document types. Kofax VRS works alongside your scan application to ensure that every scanned image meets your quality standards. Through instant detection of poor image quality, Kofax VRS performs automatic image enhancements. Kofax VRS provides a set of interactive adjustment controls to eliminate guesswork with easy, real-time image correction.

This guide includes important information to help you install or upgrade Kofax VRS and activate the product license in either a standalone or client/server environment.

All Kofax VRS installations include the Kofax VRS Test Console and the Kofax VRS Test Application (or *VCDemo*). Use either of these sample scan applications to test or demonstrate the benefits of Kofax VRS.

System requirements

In addition to the requirements listed here, information about supported operating systems and other system requirements is available in the *Kofax VRS 5.2.0 Technical Specifications* document, which is available from the [Kofax Knowledge Base](#) on the Kofax website. The document is updated regularly, and we recommend that you review it carefully before installing your product.

Note To minimize the number of restarts required during the Kofax VRS product installation, we recommend that you preinstall the Microsoft Visual C++ Redistributables and Microsoft .NET Framework 4.7, as explained below.

Microsoft Visual C++ Redistributables

During a standalone or server installation, the Kofax VRS installer checks to determine if Microsoft Visual C++ 2013 Redistributable (x86) - 12.0.30501 and Microsoft Visual C++ 2015-2019 Redistributable (x86) - 14.22.27821 are already installed. If not, the Visual C++ Redistributables are installed automatically for you.

During a Kofax VRS client workstation installation, the Visual C++ Redistributables cannot be installed automatically. Verify that the Visual C++ Redistributables are pre-installed before you install Kofax VRS on a client workstation. The required files are provided with your Kofax VRS product files:

```
Media\ISSetupPrerequisites\{09F56021-05C8-46A2-BCD8-DBF87ED5C928}\vc_redist_x86.exe
```

```
Media\ISSetupPrerequisites\{5bfc1380-fd35-4b85-9715-7351535d077e}\vc_redist.x86.exe
```

Microsoft .NET Framework 4.7

Kofax VRS 5.2.0 requires Microsoft .NET Framework 4.7 or later.

During a Kofax VRS standalone or server installation, the installer checks to determine if .NET Framework 4.7 or later is already installed. If not, .NET Framework 4.7 is installed automatically for you.

During a Kofax VRS client workstation installation, .NET Framework 4.7 is not installed automatically. Verify that .NET Framework 4.7 or later is pre-installed before you install Kofax VRS on a client workstation. If not, .NET Framework 4.7 is available with your Kofax VRS product files:

```
Media\ISSetupPrerequisites\{C1015097-96FE-4C5E-BD95-37910B3B16FF}\NDP47-
KB3186497-x86-x64-AllOS-ENU.exe
```

Additional prerequisite

If you are currently running Windows 7, Windows Server 2008 R2 or Windows Server 2012, a Windows hotfix must be installed before you can proceed with the .NET Framework 4.7 installation.

During a Kofax VRS standalone or server installation, the installer checks to determine if the hotfix is already installed. If not, the hotfix is installed automatically for you.

During a Kofax VRS client workstation installation, the hotfix is not installed automatically. You must pre-install the hotfix, which is available with your product files. Use the following table to determine where to find the hotfix required for your operating system.

Operating system	Kofax VRS product files - hotfix location
Windows 7 x86 Windows Server 2008 R2 x86	Media\ISSetupPrerequisites\{E03F1F8E-5020-49D4-BB38-D7E4C6FDF860}
Windows 7 x64 Windows Server 2008 R2 x64	Media\ISSetupPrerequisites\{E03F1F8E-5020-49D4-BB38-D7E4C6FDF861}
Windows 2012	Media\ISSetupPrerequisites\{E03F1F8E-5020-49D4-BB38-D7E4C6FDF862}

Hardware

- Minimum 1 GHz or faster: 32-bit (x86) or 64-bit (x64) AMD / Intel processor
- Minimum 2 GB RAM
- 20 GB of available disk space

Certified Kofax VRS scanners

When a scanner is certified for Kofax VRS, it goes through a rigorous testing process to identify and select the best default settings. For this reason, we recommend that you use Kofax VRS only with certified scanners.

Kofax VRS is also capable of working with a scanner that uses a "compatible" scan source created with a non-certified TWAIN or ISIS driver. You may experience less than optimal image quality while working with a compatible scan source. You can download Kofax VRS for preliminary testing with a compatible scan source prior to purchasing a product license.

To be compatible with Kofax VRS, a non-certified scan source must meet the following requirements:

- Ability to output an 8-bit grayscale image as a single image or 24-bit color
- TWAIN driver or ISIS driver support

You can use the Scanner Configurator on the Kofax website at www.kofax.com to view information about using Kofax VRS with industry-standard scanners. The Scanner Configurator also includes details about supported licenses, recommended configurations, and technical notes.

Component Installers

During the Kofax VRS installation process for standalone or client software, you are prompted to select the name of your scanner from a list of certified scanners. The Kofax VRS installer uses the name of the certified scanner to select the appropriate default scan profile. Because the list of Kofax VRS-certified scanners is updated on a continual basis, some scanners may not be certified in time to be published on the list presented during the installation process. Drivers for these unlisted certified scanners are made available as Kofax VRS Component Installers, which you can download from the Support pages on the Kofax website at www.kofax.com.

If you require a Kofax VRS Component Installer, complete the Kofax VRS installation process according to the instructions in this guide (see [Installation Procedures](#)). When prompted to select a scanner, click Next to bypass scanner selection. After the installation is finished, check the Kofax VRS web pages on the Kofax website to download and run the Kofax VRS Component Installer with the driver required for your scanner. You also need to follow the manufacturer's instructions for installing and connecting the scanner. Kofax VRS Component Installers are available only for scanners that are certified for use with Kofax VRS. Non-certified scanners can be used with Kofax VRS if they meet the requirements outlined in [Certified Kofax VRS scanners](#).

Installation procedures

To perform a new installation, download Kofax VRS Elite 5.2.0 from the Kofax Fulfillment site to a local drive, or use the removable installation media issued at the time of purchase (see [Product files location](#)). You can install VRS in a standalone or client/server environment.

Note Kofax VRS Elite is designed to install successfully while User Account Control (UAC) is enabled and set to the Medium level (default) or lower. If the installation does not succeed with UAC enabled, you can turn off UAC, restart the computer, and then retry the Kofax VRS installation. After installing Kofax VRS successfully, you can turn on UAC again.

Upgrades

To perform an in-place Kofax VRS upgrade, follow the procedures in this guide for a [standalone](#) or [client/server installation](#). When you start the installation, the existing instance of Kofax VRS is detected and noted on the first installer screen: *"The InstallShield Wizard will upgrade Kofax VRS on your computer."* From that point forward, the installer guides you through the upgrade process.

You can upgrade to Kofax VRS Elite 5.2.0 without removing an existing 5.x or 4.x version beforehand. However, if Kofax VRS 4.x is currently installed on an operating system earlier than Windows 7, an in-place upgrade is not supported.

Installation with Kofax Capture

Kofax VRS is installed "silently" as part of all Kofax Capture installations, so it is not required to install Kofax VRS separately if you have a Kofax Capture installation already in place. When installed silently with Kofax Capture, Kofax VRS does not appear on the "Currently installed programs" list in the Programs and Features utility.

If your Kofax Capture installation includes an earlier version of VRS, you can upgrade it by running the VRS 5.2.0 installer. The installer automatically detects and replaces the earlier version. In some cases, you may be prompted to confirm the replacement.

Standalone installation

A standalone configuration is appropriate if you plan to perform all Kofax VRS administration, scanning, and image processing tasks on the same computer.

To activate the license during installation, you need the Kofax VRS part number, serial number, and product code issued at the time of purchase. If you attempt license activation without success during the installation process, you can temporarily run Kofax VRS during a grace period. Once the grace period lapses, a digital stamp is applied to all images that you scan. Image stamping is discontinued as soon as you activate the license successfully.

Note Before starting an upgrade, we recommend that you close all File Explorer instances to avoid installer prompts that request a computer restart. Also, if you have an existing Kofax VRS standalone installation, it is automatically detected when you install Kofax VRS 5.2.0.

1. Confirm that your scanner is installed and connected to the computer according to the manufacturer's instructions.
2. Close all applications on the computer and make sure that you are logged in as a user with Administrator rights.
Some Domain Administrator accounts prevent you from accessing certain folders and/or registry entries on the local computer. Make sure that your Administrator account gives you the same level of folder and registry access as a Local Administrator account.

3. Start the installer by running **setup.exe** from one of the following:
 - Folder containing the Kofax VRS product files
 - Removable electronic media
 4. On the Welcome screen, click **Next** to proceed with setup.
 5. On the **License Agreement** screen, carefully review the terms of the **End User License Agreement**:
 - Use the scroll bar to bring other sections of the license agreement into the viewing area.
 - Use the **Print** button to print a copy of the full license agreement.
 6. Do one of the following:
 - Select **I accept the terms in the license agreement**, and click **Next** to proceed with the installation.
 - Select **I do not accept the terms in the license agreement**, and click **Next** to exit the installation.
 7. On the **Destination Folder** screen, do one of the following to select the location for installing Kofax VRS.
 - Click **Next** to use the default installation folder listed on the screen.
 - Click **Change** to specify another installation path, and then click **Next**.
 8. On the **Setup Type** screen, select **Standalone** and click **Next**.
 9. On the **Ready to Install the Program** screen, do one of the following:
 - Click **Install** to start the installation.
 - Click **Back** to review or update settings before starting the installation.
- After you start the installation, status messages appear while the process is underway, and you may be prompted to restart your computer after the installation is finished.
10. When the **Kofax VRS Administration Console - License** panel appears, click **Help** and follow the online instructions to activate the license, and then click **Next**.
The **Kofax VRS Administration Console - Scanner Configuration** panel appears.
 11. On the **Scanner Configuration** list, select the name of your scanner and click **Next**.
 12. When you are notified that the installation has finished successfully, click **Finish** to exit the installer.

Client/server installation

A client/server configuration is appropriate if you plan to perform scanning and image processing on multiple workstations, which may be distributed across several locations. In this environment, the Kofax VRS Administration Console on the server computer is typically used for centralized tasks related to license and scan profile management, and the client workstations are used for scanning and image processing. You must complete the Kofax VRS server installation to create the Kofax VRS.msi file required to install Kofax VRS client software.

To activate the license during the server installation, you need the Kofax VRS serial number and product code issued at the time of purchase. If you complete the server installation without activating the license successfully, a digital stamp is applied to images scanned from client workstations. Image stamping is discontinued as soon as the client successfully obtains a license from the license server.

Port requirement

For client/server installations, Kofax VRS requires port 3581 to remain open for communications related to the license and shared files. You may need to adjust your firewall or security settings to meet this requirement.

Install the Kofax VRS server

1. Close all applications on the computer where you want to install the Kofax VRS server, and make sure that you are logged in as a user with Administrator rights.
2. Start the installer by running **setup.exe** from one of the following:
 - Folder containing the Kofax VRS product files
 - Removable electronic media
3. On the Welcome screen, click **Next** to proceed with setup.
4. On the **License Agreement** screen, carefully review the terms of the **End User License Agreement**:
 - Use the scroll bar to bring other sections of the license agreement into the viewing area.
 - Use the **Print** button to print a copy of the full license agreement.
5. Do one of the following:
 - Select **I accept the terms in the license agreement**, and click **Next** to proceed with the installation.
 - Select **I do not accept the terms in the license agreement**, and click **Next** to exit the installation.
6. On the **Destination Folder** screen, do one of the following to select the location for installing Kofax VRS.
 - Click **Next** to use the default installation folder listed on the screen.
 - Click **Change** to specify another installation path, and then click **Next**.
7. On the **Setup Type** screen, select **Server** and click **Next**.
8. On the **Server Information** screen:
 - a. Enter the name of the server where you are installing Kofax VRS. Use the short NetBIOS name or the fully qualified name (computer name with domain name).
 - b. Enter port **3581**, which is required by Kofax VRS for communications related to the license and shared files.
 - c. Click **Next**.
9. On the **Ready to Install the Program** screen, do one of the following:
 - Click **Install** to start the installation.
 - Click **Back** to review or update settings before starting the installation.

After you start the installation, status messages appear while the process is underway, and you may be prompted to restart your computer after the installation is finished.

The **Activate** window appears.
10. On the **Activate** window, select **Software** and then type the serial number and product code issued to you at the time of purchase.

11. Click **Automatic** to activate the license.

Note If you are unable to connect to the license server for activation, contact Kofax Sales for instructions. Sales personnel will send you an email message containing an activation code. Click **Manual** on the activation window to paste the code into the text field, and then click **Activate**.

12. When you are notified that the installation is complete, click **Finish** to exit the installer.
13. Verify that the `Deployment` folder was automatically created during the server installation. `Deployment` is a subfolder of `Program Files (x86)\Kofax\Imgctl`.
The `Deployment` folder contains `Kofax VRS.msi`, which contains preconfigured information required to install Kofax VRS client software. Client workstations use `Kofax VRS.msi` to contact the centralized license and scan profile repository on the server computer.

Install Kofax VRS on a client workstation

After installing the Kofax VRS server, use the procedure in this section to install and deploy Kofax VRS on client workstations. As another option, use management software such as System Center Configuration Manager (SCCM) or Systems Management Server (SMS) to distribute `Kofax VRS.msi` and `VRSAccess.xml` to client workstations. For more information about `VRSAccess.xml`, see [Administrator Access](#).

1. Confirm that your scanner is installed and connected to the client workstation according to the manufacturer's instructions.
2. Verify that the required Visual C++ Redistributables, along with .NET Framework 4.7 or later, are pre-installed on the client workstation. If not, they are available from your Kofax VRS product files. For details, see [Microsoft Visual C++ Redistributables](#) and [Microsoft .NET Framework 4.7](#).
3. Close all applications on the workstation and make sure you are logged in as a user with Administrator rights.
Some Domain Administrator accounts prevent you from accessing certain folders and/or registry entries on the local computer. Make sure that your Administrator account gives you the same level of folder and registry access as a Local Administrator account.
4. On the workstation, run **Kofax VRS.msi**, which was created during the server installation.
5. On the Welcome screen, click **Next** to proceed with setup.
6. Review the **End User License Agreement**:
 - Use the scroll bar to bring other sections of the agreement into the viewing area.
 - Use the **Print** button to print a copy of the entire license agreement.
7. Do one of the following:
 - Select **I accept the terms in the license agreement**, and click **Next** to proceed with the installation.
 - Select **I do not accept the terms in the license agreement**, and click **Next** to exit the installation.
8. On the **Destination Folder** screen, select the location for installing Kofax VRS.
 - Click **Next** to use the default installation folder listed on the screen.
 - Click **Change** to specify another installation path, and then click **Next**.

9. On the **Server Information** screen, verify the server name and port number specified during the server installation. If the information has changed since the server installation, update it here.
 - a. If updating the server name, use the short NetBIOS name or the fully qualified name (computer name with domain name).
 - b. Port **3581** is required by Kofax VRS for communications related to the license and shared files.
 - c. Click **Next**.
10. On the **Ready to Install the Program** screen, do one of the following:
 - Click **Install** to start the installation.
 - Click **Back** to review or update settings before starting the installation.

After you start the installation, status messages appear while the process is underway, and you may be prompted to restart your computer after the installation is finished.

The **Scanner Configuration** window appears.
11. On the list, select the name of your scanner and click **Next**.
12. When you are notified that the installation is complete, click **Finish** to exit the installer.

SNMP extension agent

In a Kofax VRS client/server installation, you can integrate the Kofax VRS SNMP extension agent with Kofax Monitor or an industry-standard management console to collect scanner health data from multiple client scan stations. For more information about deploying the Kofax VRS SNMP extension agent, see the Kofax website at www.kofax.com.

Silent installation

As an alternative to the standard Kofax VRS installation process, you can achieve the same results by performing a silent installation from an elevated Command Prompt that has administrator privileges. During a silent installation, no manual entries are required.

1. Copy setup.exe or Kofax VRS.msi to your standalone, server, or client computer.
 - For an existing instance of Kofax VRS, copy the file to your installation folder, which typically uses the default path:
64-bit: C:\Program Files (x86)\Kofax\ImgCtls
32-bit: C:\Program Files\Kofax\ImgCtls
 - For a new Kofax VRS installation, copy the file to any folder on your computer. The default path will be created automatically during the installation process.
2. For client workstations only: Verify that you have pre-installed the required Visual C++ Redistributables, along with .NET Framework 4.7 or later. If not, they are available from your Kofax VRS product files. For details, see [Microsoft Visual C++ Redistributables](#) and [Microsoft .NET Framework 4.7](#).
3. To install Kofax VRS using the default path, run one of the following commands from an elevated Command Prompt that has administrator privileges, as applicable:
 - Standalone: `Setup.exe /s /v" /qn"`
 - Server: `Setup.exe /s /v"INSTALL_TYPE=\"Server\" /qn"`
 - Client: `Msiexec.exe /i "<PATH_TO_VRS_MSI>\Kofax VRS.msi" /qn`

4. To install Kofax VRS using a custom path, run one of the following commands from an elevated Command Prompt that has administrator privileges, as applicable:

Note The use of the backslash and quotation mark characters in the command syntax is slightly different for Setup.exe, compared to Msiexec.exe.

- Standalone 64-bit:

```
Setup.exe /s /v" INSTALLDIR="C:\Program Files (x86)\<PATH>\ImgCtls\" /qn"
```

- Standalone 32-bit:

```
Setup.exe /s /v" INSTALLDIR="C:\Program Files\<PATH>\ImgCtls\" /qn"
```

- Server 64-bit:

```
Setup.exe /s /v" INSTALL_TYPE="Server\" INSTALLDIR="C:\Program Files (x86)\<PATH>\ImgCtls\" /qn"
```

- Server 32-bit:

```
Setup.exe /s /v" INSTALL_TYPE="Server\" INSTALLDIR="C:\Program Files\<PATH>\ImgCtls\" /qn"
```

- Client 64-bit:

```
Msiexec.exe /i "<PATH_TO_VRS_MSI>\Kofax VRS.msi" INSTALLDIR="C:\Program Files (x86)\<PATH>\ImgCtls\" /qn
```

- Client 32-bit:

```
Msiexec.exe /i "<PATH_TO_VRS_MSI>\Kofax VRS.msi" INSTALLDIR="C:\Program Files\<PATH>\ImgCtls\" /qn
```

Uninstall VRS silently

Use this procedure to uninstall VRS silently on a standalone, server, or client computer.

1. Open an elevated Command Prompt that has administrator privileges, and navigate to the Kofax VRS installation folder.
2. Run the following command:

```
Msiexec.exe /x{8C3B9971-87E9-4D91-AF83-54F518590387} /qn
```

Accessing Multicore and EBC processing features

If your Kofax VRS license supports the Multicore or Enhanced Bar Code (EBC) features, they are not available if you are using a low throughput scanner. In this situation, you can gain access to the features by editing the KofaxReg.xml file as described in the following procedure. Use this procedure only for client/server installations.

1. Use a path similar to the following to locate KofaxReg.xml:

```
Documents and Settings\All Users\Application Data\Kofax\Vrs\KofaxReg.xml
```

2. Open the file with an editor and locate the following line:

```
<ELEVATELICENSE Value="None" />
```

3. Change "None" to "Workgroup" or "Production", similar to the following:

```
<ELEVATELICENSE Value="Production"/>
```

4. Save the file.

Register Kofax VRS

If you are working with a Kofax VRS Basic or Professional license, you are prompted to enter contact information to complete the product registration when you start Kofax VRS the first time. Follow the instructions on the screen to register your product online or over the phone.

As a registered user, you are informed about new products, supported scanners, and any updates to Kofax VRS.

Upgrade to Kofax VRS Elite

The Kofax VRS Basic and Professional licenses support specific feature sets. An extended set of features is available if you upgrade to a Kofax VRS Elite license (see the *Kofax VRS Feature Sets by License* table).

Kofax VRS Basic and Professional licenses give you the ability to preview Kofax VRS Elite features before making the decision to upgrade your license. To preview the features, select Kofax VRS Elite Demo from the Kofax VRS program folder or from the Administration Console. While previewing Kofax VRS Elite features, any images that you scan are digitally stamped. The stamping is discontinued if you upgrade to Kofax VRS Elite, or turn off the demo. If you turn off the demo, the Kofax VRS Elite features are no longer available. After obtaining a Kofax VRS Elite license, use the License panel on the Administration Console to activate the features permanently. For instructions, see the online help.

Administrator access

By default, Kofax VRS users have full access to every feature in the product. If you prefer to grant full access only to Kofax VRS administrators, use an XML file to manage access based on user-specific permissions. The file for this purpose is VRSAccess.xml, which is available in the <Common Application Data> folder:

ProgramData\Kofax\Vrs

Here is an excerpt from VRSAccess.xml:

```
<?xml version="1.0" encoding="utf-8" standalone="yes"?>
```

```
<VRSAccess>
  <DisablePublish>0<DisablePublish>
  <DisableAllAdmin>0</DisableAllAdmin>
</VRSAccess>
```

By default, VRSAccess.xml elements are set to zero (0), granting full access to Kofax VRS features.

The table describes how to update the elements for VRSAccess.xml in <Common Application Data> to restrict access to Kofax VRS administrator features.

VRSAccess.xml Elements

If element is set to:	Logged-in user can access all Kofax VRS features except:
DisableAllAdmin = 1 DisablePublish value is ignored	Preferences, Profile, Auto Profile, and License panels on the Kofax VRS Administration Console. Profile toolbar controls on the Kofax VRS Interactive Viewer.
DisablePublish = 1 DisableAllAdmin value is ignored	Publish feature on the Profiles panel on the Kofax VRS Administration Console.

To set more than one level of access to Kofax VRS on the same computer, create an override version of VRSAccess.xml with alternate settings, and place it in the <User Application Data> folder located here:

Users\<Current User>\AppData\Roaming

When a Kofax VRS user logs in to the computer, <User Application Data> is always checked first for the override file. If the file exists, it is used even if it is empty (in which case it has the same effect as the default VRSAccess.xml file with values set to zero). Otherwise, the VRSAccess.xml file in <Common Application Data> is used.

The override file is useful if you are a Kofax VRS administrator, because you can log in to any Kofax VRS workstation with unrestricted access and manage settings related to scan profiles, Auto Profile training data, or the product license.

Use VRSAccess.xml to assign different levels of access to Kofax VRS users on the same computer or multiple computers. For example, you might restrict a scan operator from administrator features while assigning the scan operator’s supervisor access to all administrator features except Publish. You could assign full access to any user who is responsible for managing a Kofax VRS installation. The level of access is based on each user’s Windows login.

As another option, you can use management software such as SCCM or SMS to distribute VRSAccess.xml files to Kofax VRS client workstations.

Note Apply read-only permission to VRSAccess.xml to prevent unauthorized users from altering the file.
